No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                           "SIDS2/gcgdata/geneseq/genesegn-embl/NA1980.DAT:*

XX A (UYGE-) UNIV GEORGIA RES FOUND INC.

XX PRIS. 2001-565596/63.

PPSDB: AAE09779, AAE09780, AAE09781.

The present invention relates to a positive selection marker compounds e.g., arabitol, ribitol which confer selective advantage on transformed CC involves conferring to transferred cells the lability to metabolise arabitol, ribitol and/or manitol. The positive selection method is conferring to transferred cells the lability to metabolise arabitol, ribitol and/or manitol. The positive selection method is conferred in positive selection method, the presence of the gene of interest in the genetically transferred cells from a population of cells confered with transformed cells may be identified by simple visual means without the consolidation of the transformed cells may be identified by simple visual means without the consolidation of the relasse of a marker gene. This cechnique also avoids the release of antibiotics or other dangerous cells in the density of the relasse of antibiotics or other dangerous cells and ribitol transporter.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

The invention relates human kinases (PKIN) and their corresponding nucleic acid sequences. PKIN and its DNA are useful for diagnosing, treating and preventing cancer, an immune system disorder (e.g., acquired immune deficiency syndrome (AIDS), Addison's disease, allergy, asthma, atherosclerosis, multiple sclerosis, psoriasis), disorders

affecting growth and development (e.g., arteriosclerosis, cirrhosis, hepatitis), cardiovascular disorder (e.g., hypertension, myocardial infarction, Goodpasture's syndrome), and a lipid disorder (e.g., fatty liver, Gaucher's disease, Namann-Pick's disease, hypercholesterolaemia, hyperlipidaemia, obesity), and for assessing the effects of exogenous compounds. Anti-PRIN antibody is useful in a diagnostic test for a condition or a disease associated with the expression of PKIN in a biological sample. A composition comprising PKIN or an agonist or antagonist of PKIN is useful for treating a disease or condition associated with decreased or increased expression of functional PKIN. It is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN DNA is useful for creating knockin humanised animals or transgenic animals to model human diseases, and in somatic or germline gene therapy. The present sequence is human and the second of the control of the proteome of a tissue or cell type.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1118

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemctactic/chemckinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                  ۵
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GGTACTGGATAAAAACGGTGATCCATTGCCTGTCAGCCCGGAAGGAGATGCAAAGCAAAA 1178

Novel diagnostic and therapeutic polynucleotides, used in disease diagnosis and for gene therapy of conditions such as cancer and thalassemia.
                         Claim 1; Page 253-254; 299pp; English.
```

The present sequence for human diagnostic and therapeutic (dithp) cDNA sequence #5 is 1 of 71 (AAS03012-AAS03082) novel sequences described in the invention. The present sequence (Incyte ID No: 05377811dec) corcodes an enzyme molecule. The dithp polynicicotides may be used to diagnose a condition disease or disorder associated with human nucleic acids. Dithp polynucleotides may used to generate hybridisation probes for use in chromosomal mapping. Polypeptides (DITHP) encoded by disorders such as severe combined immunodeficiency syndrome (SCLD), cystic fibrosis, thalassemia, haemophilia resulting from Factor VIII cyracidesness, cardiovascular disorders, e.g familial hypercholesterolaemia (FH), cell proliferative disorders e.g. cancers, neurodegenerative disorders, autoimmune/inflammatory disorders. infectious disorders and developmental disorders. The antibodies can be used to analyse protein expression levels.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLi6176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes primer sets for synthesising 5602

(ull-length cDNas defined in the specification, Where a primer set
comptises: (a) an oligo-dT primer and an oligonuclectide comptimentary
to the complementary strand of a polynuclectide which comprises one of
the 5602 nuclectide comprises at least 15 nuclectides; or (b) a combination
of an oligonuclectide comprising a sequence complementary to the
complementary strand of a polynuclectide which comprises a 5'-end
sequence and an oligonuclectide comprising a sequence complementary to the
complementary strand of a polynuclectide which comprises a 5'-end
sequence and an oligonuclectide comprising a sequence complementary to the
polynuclectide which comprises a 1'-end sequence, where the
oligonuclectide which comprises a 1'-end sequence, where the
oligonuclectide which comprises as 1'-end sequence, the pagenerical and these combination of
the 5'-end sequence, 3'-end sequence; selected from those defined in
the specification. The primers are useful for synthesising polynuclectides,
particularly full-length cDNAs. The primers are also useful for the
particularly full-length cDNAs. The primers are also useful for the
cubnas easily without any specialised methods. AAH13628 and
AAH13633 to AAH13629 to AAH13632
ceptresent human amino acid sequences; and AAH13629 to AAH13632
ceptresent pullopurclectides, all of which are used in the exemplification
                                                                                                                                                                                                      Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

                                                                                                                                                                                                                                                                                            1377
                                                                                                                                                                                                                                                                                                                                                     1317
                                                                                                                                                                                                                                                                                                                                                                                2493
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; SEQ ID NO 30763; 21pp + Sequence Listing; English

the specification. The primer sets can be used in gene therapy. The primers are useful for synthesising polynucleotides, in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length
                                                                                                                                                 the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5 end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3 end sequence, where the oligonucleotide which comprises a 1 east 15 nucleotides and the combination of the 5 end sequence/3 end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and the specification.
                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3093

                                                                                                                                                                                      The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,
                                                                                                                                                                                                                                                                                                                                                                                                                    Tang

                   The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5 end sequence and an oligonucleotide comprising a sequence complementary to the sequence and an oligonucleotide comprising a sequence complementary to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0ta

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAH355893 represent human amino acid sequences; and AAH13629 to AAH3632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                            1517

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1795
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated polynucleotide (ABN27253-ABN33262) with cytostatic activity. The polynucleotide is used to produce a polypeptide, to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and to inhibit tumour growth. The polynucleotide is used as a probe in mapping and tissue profiling. The encoded polypeptide and antibodies to the polypeptide can also be used for therapeutic and diagnostic purposes. The polynucleotide is useful for the polynucleotide is useful for the polynucleotide and antibodies to the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful for the polynucleotide is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid for producing a polypeptide, dete expressed genes correlated with a cancerous state and inhibiting tumor growth -

The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. ESTs sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends; and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion

                      the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH3629 to AAH13632
                                                                                                                                                                                                                             the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprision a security.
                                                                                                                                                sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in
                                                                                                                                                                                                                                                                        The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of
                                                                                                                                                                                                                                                                                                                                                                                               Primer sets for synthesizing polynucleotides, particularly the full-length cDNAs defined in the specification, and for the defined and/or diagnosis of the abnormality of the proteins encoded by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           adapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination, metabolic or catabolic pathway engineering. Using EST's provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF07478 to AAF11247 represents EST's from the results. AAF07478 to AAF11247 represents EST's from Aspergillus frame, AAF11854 represents EST's from Aspergillus oryzae; and AAF14879 to AAF11853 represents EST's from Aspergillus oryzae; and AAF14879 to AAF1337 represents EST's from Trichoderma reesei, which are all specifically claimed in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be dentified and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1187
                                                                                                                                                                                                          1307

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (Fr) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 88;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags \boldsymbol{\cdot}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1073 CACAAAGTGTGGCAGGCATCGGTTTTGATGCCACCTGTTCTCTGGTGGTACT-----GG 1126
